Reporting using quarto

Reproducibility has never been easier

Ottavia M. Epifania

Reproducible reports integrate the code used for data analysis with the document that presents the findings, this enabling a continous flow between the analytical process and its interpretation.

While `RMarkdown` undoubtely opened the way to this process, `quarto` represents the next generation, as it is even easier to use than `RMarkdown` and includes new features, making the reporting process more accessible.

This course provides an introduction to `quarto` and its basic features, along with a presentation on how to exploit it functionalities to create polished, professional outputs with embedded code chunks.

Some of the topics covered within this seminar are:

- Executable code chunks
- Tables, charts, and references seamlessly.
- Reports and papers
- Presentation, posters & so much more
